

Estimator and Analyst Codes in Estimate and Recommendation Data

Estimator and Analyst Codes in Estimate and Recommendation Data

Detail

The analyst codes are the same in both IBES files, but the estimator codes are not (i.e., a given estimator may have different codes in the two files). To illustrate:

- The ESTIMATOR 123 in the detail files will not refer to the same company as ESTIMATOR MASK CODE 123 in the recommendation files.
- ANALYST CODE 123 in the detail files will refer to the same person as ANALYST MASK CODE 123 in the recommendation files (both international and US).

Regarding changes over time and reuse:

- If ESTIMATOR 123 is a small company that goes out of business, 123 will not be reused for a new company. But if the company is acquired, it may carry over to the new merged company.
- ANALYST 123 refers to the same person over time. If that person changes companies, his number will stay with him. If he retires, 123 will not be reused.
